

Notice

Users of the

Digital Aeronautical Information CD:

Digital Obstacle File

Beginning with the April 15, 2004 edition.

The Digital Obstacle File latitude and longitude attributes will be modified to show 100ths of a second (e.g. 39 29 30.01). This change effectively brings the horizontal resolution of the data to 1 foot. The increased spatial resolution will apply to data with Action Code Julian dates greater than or equal to A4025. Data with Action Code Julian dates before A4025 will be shown as .00 and the .00 will be used only as a place holder; no additional precision should be assumed. Please continue to refer to the accuracy code for each record.
